10 tips for success**

D.A. Ashlee Haylar

**Preventive Dentistry
Reducing initial enamel white spots;
Using salivary test;
Tooth-Mousse application;
Oral health education & Disclosing solutions**

Hygienist Libby Warlow

Clinical Teamwork is based on the principle of reducing stress to the patient as well as to the clinicians. Our dental patients are part of the whole dental team together with the dentist, the dental assistant and the hygienist. A coordinated teamwork approach to provide dental care to our patients will reduce stress and fatigue to all. This approach will enhance better efficiency and better patient care.

Clinical Teamwork is achieved through the cooperation, understanding and coordination of the whole dental team.

The **Australian dental team**, using clinician & dental assistant, will demonstrate the coordinated stress reducing process of Clinical Teamwork when providing different aspects of dental treatment to patients.

This is a **Hands-on Workshop** specially provided to help improve the delivery of dental care to Mongolian patients.
